

NETWORK RADIO GATEWAY DEPLOYABLE SYSTEM DS-04v3

UNLEASH UNPRECEDENTED CONNECTIVITY

Introducing the NRG® DS-04v3—the latest powerhouse in Parraid's groundbreaking Radio over IP (RoIP) solutions. This all-in-one, standalone network appliance revolutionizes communication by seamlessly integrating voice conferencing, MIL-STD-188-184, HPW data, and remote radio configuration and control into a single, robust platform. Our latest Network Radio Gateway software NRG5 and any hardware offerings using the new Compact Radio Interface Board (CRIB) or derivative products based on it, and the Legacy Data Adapter (LDA) are Non-ITAR export classification ECCN 5A991 and 5D991.

Powered by NRG5 for Maximum Interoperability

Harnessing the cutting-edge NRG5 technology, the DS-04v3 employs a decentralized mesh network of gateways and clients. This modern infrastructure ensures flawless voice and data support over legacy U.S. Military Combat Net Radios (CNR), Joint Tactical Radio Systems (JTRS), and commercial Land Mobile Radio (LMR) Systems—delivering unparalleled interoperability across diverse communication systems.

Flexible Conferencing with Infinite Scalability

Experience unmatched communication flexibility with NRG's versatile conferencing server. Capable of simultaneously supporting multiple audio sources—including analog, digital, cellular phones, and both military and civilian radios—the system allows for seamless communication in either conference or channel mode. Its advanced radio bridging connects like and dissimilar radio devices effortlessly.

Fault-Tolerant and Efficient Multiprocessing

Boost your operational efficiency with the DS-04v3's enhanced multiprocessing capabilities. By enabling processors to share workloads across all connected appliances, the system ensures fault tolerance and offers infinite scalability. This means you can expand your communication network without compromising performance or reliability.

Elevate Your Mission-Critical Communications Today

Step into the future of seamless, scalable, and secure communications with the NRG DS-04v3. It's not just an upgrade—it's a transformation of your entire communication infrastructure.

FEATURES

- DS-04v3 model is compact, with a rugged fanless enclosure
- Connects two four-port radio systems and up to 50 endpoints
- Adapts from small command posts to full enterprise integration
- Removable SSD
- Trusted Platform Module 2.0 (TPM)
- Front panel system and status tri-color LEDs
- Windows 10/11 Support
- Leverages Rally Tactical Systems' Engage platform and Rallypoint software

BACK

BENEFITS & CAPABILITIES

- Scalable and Decentralized: Adapts from small command posts to full enterprise integration
- JITC certified and listed on the DISA Approved Product List
- Interoperability: Compatible with a wide range of unified communications protocols and systems, including Motorola WAVE, TOCNET, ICE, Cisco Call Manager, AT&T FirstNet, Access Net, LTE, and more
- Enhanced Radio Support: Offers remote data and radio control for both software-defined radios and legacy systems, including LMRs
- Tactical and Standalone Operations: Functions in standalone tactical configurations or integrates multiple radio circuits across IP subnetworks
- Future-Ready Transport: Supports a range of transport methods including 5G, Fiber, Mesh Radio, Software-Defined Radio, Starshield, and tactical Local Area Networks (LANs)
- Cost-Effective: Enables shared use of expensive radios across multiple users, reducing overall costs

INTEROPERABILITY

DATA

- AN/PRC-160
- AN/PRC-163
- AN/PRC-167
- AN/PRC-152/152A
- AN/PRC-117G
- AN/PRC-137
- AN/PRC-150
- AN/PRC-148
- RF-5800
- AN/PRC-117F

VOICE

- Iridium PTT
- Kenwood
- Any radio with NATO U-229 and U-329 audio connector
- HMS
- Motorola XTL-5000
- Motorola XTS-5000
- Motorola XTVA
- Motorola Micom 3R
- Ratheon ACU-1000

NRG MOBILE KIT

The DS-04v3 can be custom-configured for mobility. The NRG mobile kit is transport-ready and supports a range of transport methods including 5G, Fiber, Mesh Radio, Software-Defined Radio, Starshield, and tactical LANs.

As a complete turnkey, the NRG mobile kit features the DS-04v3, client workstations, over-the-ear headsets with foot pedals. Designed for mobility and speed, the NRG mobile kit enables disparate radios to bridge over IP anywhere.
